Exams

Exams at Monash Caulfield in 2015 (mathew.hilier[at]monash.edu)
70,000 student university

We are faced with a growing disconnect between the way *high stakes testing* is conducted using pen on paper exams and students' everyday experiences of study, work and life.

Three dimensions – Good e-Exams

Pick two?

We need to strive for all three.

Triad - Requirements

Authenticity:

Enabling a broad pedagogical landscape for the assessment of 21st Century capabilities. Go beyond a 'quiz' paradigm. Use 'tools of the trade' (word processor, spread sheet, database, math, stats, graphics, multimedia, software dev, simulations, CAD, discipline tools). Flexible for open/closed book (restricted online, or isolated offline, e-resources). Data open for analytics.

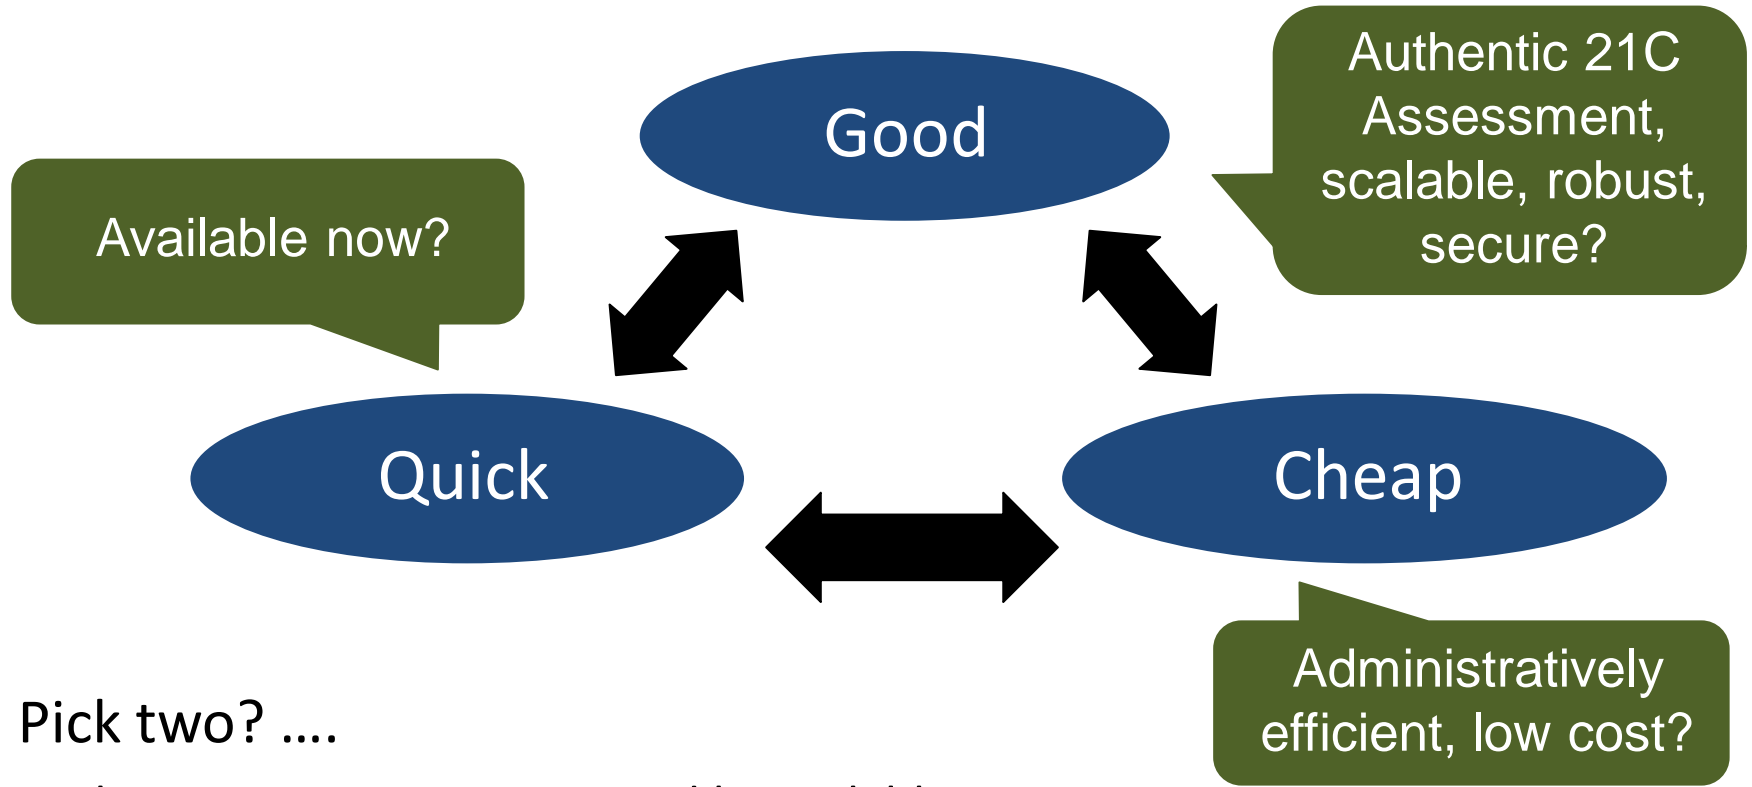

Scalability:

Mix multiple computer marked question types as well as constructed and process problems. Large scale equipment provision \approx BYOD. Reliable \neq networks!?! = optional.

Integrity:

Supervised environment. Known, consistent and controllable. System wide activity and identity logging. Anti-cheating \geq paper.

Three dimensions - Which e-Assessment Approach?

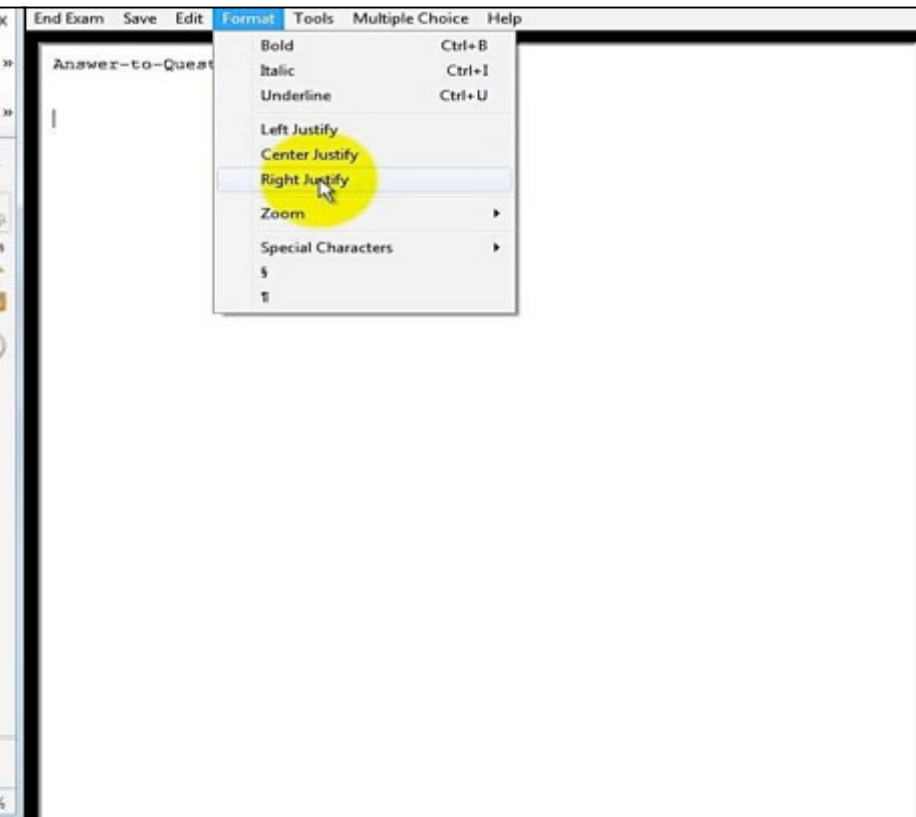

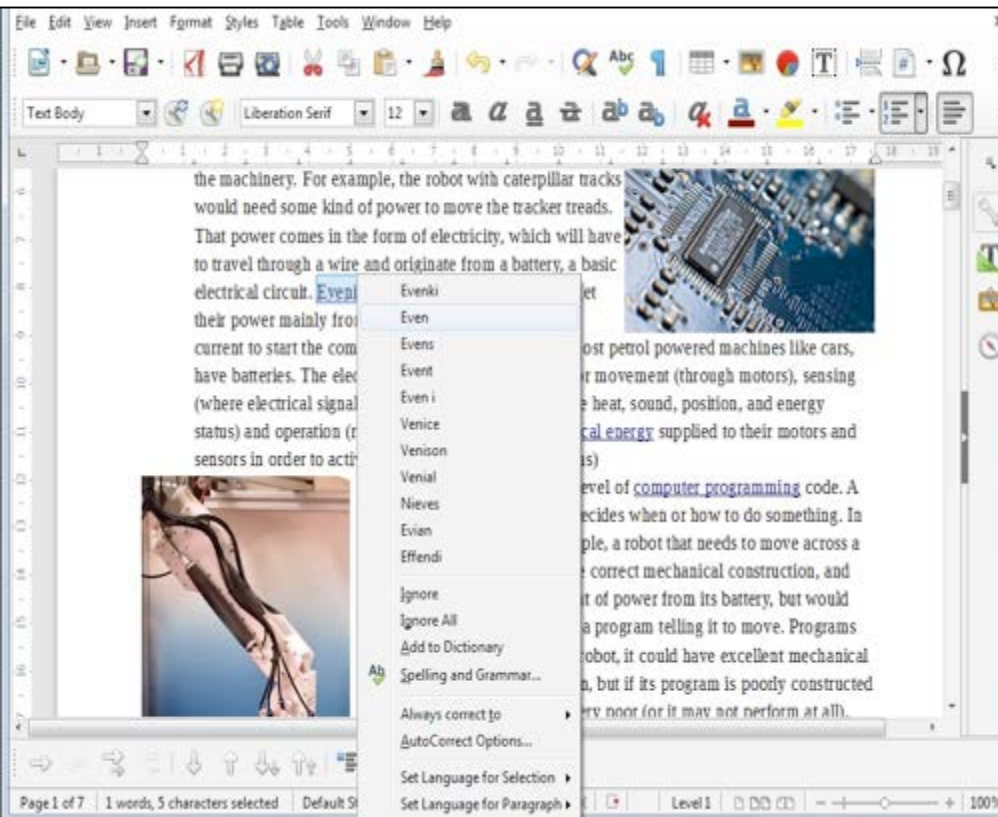

Pick two?

Authentic e-exams are not readily available off-the shelf. Investment and time required.

Engineering Problem Solving

Authentic Not

Question Text

Defining Answers

Place curly brackets "[]" around numeric value(s) requiring blank response field(s). Example: $3*3={9}$.

Range: Insert a pipe "|" between a range of values.

Example: The price is {12.2|14.5}. Student answer between 12.2 and 14.5 will be considered valid.

Scientific notation: A period MUST be used as the decimal point marker and the letter "E" or "e" for exponent.

Example: {6.022E23} to express Avogadro's number.

Complex numbers should be in the form (a + bi) where "a" and "b" need to have explicitly stated values.

Example: {1+1i} is valid whereas {1+i} is not. Similarly, {0+9i} is valid whereas {9i} is not.

Acceptable Characters

Only numbers, decimal point markers (period or comma), sign indicators preceding a number (e.g., -5), or spaces (e.g., as thousand separators, 5 000) are allowed within curly brackets. **NOTE:** For scientific notation, a period MUST be used as the decimal point marker.

Any other characters (e.g., \$ or %) can be placed outside brackets, if needed. For example: $3/10= \{30\}\%$ (Only 30 will need to be entered in the blank response field.)

When defining a range of values, the value preceding the pipe "|" must be smaller than the value after the pipe (e.g., {12.2|14.5}).

Our e-Exam Project...

Aim for:

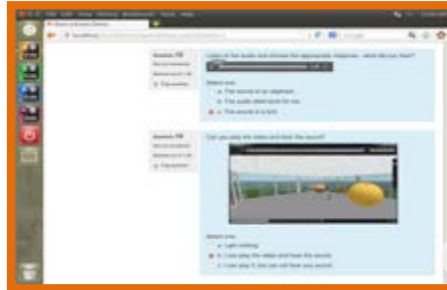

- Supervised
- High stakes
- On campus
- Large scale
